

The Logic Model

The *logic model* is an overview of the program or project that is being implemented. The logic model links the goals with the outcomes with sensitivity to intervention strategies that will be used and what they will accomplish. A typical logic model includes the following elements:

Problem Statement
Program Goal or Goals
Implementation Objectives
Intervention Strategies
Inputs and Outputs
Short-term, Medium-term and Long-term outcomes

The IELE team can help develop a logic model for any type of project.
